

29 May 1963

MEMORANDUM FOR: Deputy Director of Central Intelligence

SUBJECT: Reporting on Aerial Photography of Cuba

1. The daily report of US reconnaissance activity over Cuba (RAC Report) includes a list of the thirty highest priority targets on the island as designated by the Committee on Overhead Reconnaissance. For a target to qualify as "covered" on this chart, the entire target area must have been observed without significant cloud cover, haze, or image degradation. This standard has been reflected in the RAC Report chart since its inception, although the criteria have not been stated explicitly.

25X1B

Intelligence analysts in the Military Division, working in conjunction with MIC interpreters, were able to determine from this photography that most of the equipment normally observed at Santiago de las Vegas was present, including the tanks, PRG transporters,

trenchway bridges, and cargo trucks, and that the two AAA sites at the camp were still in place.
